ReVision LASIK and Cataract Surgery

OPHTHALMOLOGISTS: D. James Schumer, M.D., Rupa Shah, M.D.

OUR STORY: Giving patients a fresh outlook on life has been life changing for Dr. James Schumer, founder of ReVision LASIK and Cataract Surgery. His practice began in the town of Mansfield, just north of Columbus. While maintaining the Mansfield practice, Dr. Schumer opened a second location here in Columbus 19 years ago on Polaris Parkway.

Dr. Schumer welcomed Dr. Rupa Shah to the ReVision team four years ago. Dr. Shah is a fellow ophthalmologist with specialized training in LASIK, cataract and corneal procedures. The two surgeons share a passion for vision care and the belief that a patient's quality of life is directly impacted by the ability to enjoy the freedom of clear vision.

It is rare to find such skill and devotion to patient care under one roof. ReVision LASIK and Cataract Surgery takes pride in utilizing the most advanced laser technology to provide patients with the highest degree of safety, accuracy and customizable vision outcomes. This technology, paired with new advancements in vision correction options, allows Drs. Schumer and Shah to provide solutions to patients who have dealt with poor vision for many years.

Personal lifestyle is a top priority at ReVision LASIK & Cataract Surgery. Many choose vision correction procedures – such as LASIK and implantable contact lenses – because they bring added comfort and convenience to daily life. Keeping track of glasses, reordering contacts and buying cleaning solution is no longer necessary. This newfound simplicity also has life-changing benefits for athletes. After a vision correction procedure, patients can simply open their eyes and engage in life.

Cool facts

Our team gets to know each patient's daily activities and hobbies to help determine the best vision solution for his or her lifestyle.

Vision correction procedures typically take only ten minutes per eye, and most patients recognize a significant improvement in vision less than 24-hours after the procedure.

Dr. Schumer and Dr. Shah have strong relationships with optometrists in the area who often refer patients to ReVision for cataract, LASIK and cornea procedures. After surgery at ReVision, patients return to their own optometrists for follow-up care.

ReVision is one of the few practices in the U.S. to use heads-up technology while performing surgical procedures. During surgery, the surgeons look forward at a large 3D monitor versus looking down through a microscope.

ReVision developed a program called "ReVision Gives Back" to support local non-profit organizations in Columbus and Mansfield.
